

INSI B-1000

This incinerator model is designed for high-temperature thermal neutralization, disposal of medical and biological waste, municipal solid waste and oil sludge.

The unit operates on diesel or gas fuel.

Loading volume: up to 1000 kg.

Combustion rate (productivity): up to 150 kg / h.

The INSI V-1000 incinerator can be equipped with additional equipment to increase the productivity and efficiency of the installation (additional air supply systems, INSI OP series waste dumpers, etc.).

Video presentations of the INSI V-1000 incinerator can be viewed at the links:

The incinerator's quality is confirmed by certificates of international standards, which guarantees strict compliance of our equipment with high environmental requirements.

Our company is a direct manufacturer, so our clients receive equipment at a favorable price!

We invite potential customers to visit our production site for a trial burning of your production waste.
