

## INSI B-500 incinerator is ready for shipment.

The INSI B-500 incinerator is designed for thermal neutralization and disposal of the following waste:

- **industrial**, not subject to recycling and the reuse of which at the enterprise is impractical;
- **medical**, including those infected and infected.

INSI B-500 is capable of destroying up to 95% of the volume of waste with the formation of a neutralized non-combustible mineral residue - ash.

Loading volume: up to 500 kg

Burning rate: up to 80 kg / h

Dimensions (without chimney), m (HxLxW): 1.5x3.13x1.8

Weight, kg: 2000

The additional air supply system makes it possible to control more smoothly the temperatures during the incineration of industrial and medical waste in the INSI incinerator and to achieve high productivity of the installation with its relatively small dimensions.

Video presentations of INSI B-500 can be viewed at the links:
